# **ARTICLE BEGINNING**

GENERAL TROUBLE SHOOTING

# \* PLEASE READ THIS FIRST \*

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

## **ACCESSORIES & ELECTRICAL**

#### CHARGING SYSTEM TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### BASIC CHARGING SYSTEM TROUBLE SHOOTING CHART

| CONDITION   | POSSIBLE CAUSE                         | CORRECTION  |
|---|--|---|
| Vehicle Will Not<br>Start                           | Dead battery                           | Check battery cells, alternator belt tension and alternator output  |
|   | Loose or corroded battery connections  | Check all charging system connections   |
|   | Ignition circuit or switch malfunction | Check and replace as necessary  |
| Alternator Light<br>Stays On With<br>Engine Running | Loose or worn alternator drive belt    | Check alternator drive tension and condition, See Belt Adjustment in TUNE-UP article in the TUNE-UP section |
|   | Loose alternator wiring connections    | Check all charging system connections   |
|   | Short in alternator light wiring       | See Indicator Warning<br>Lights in STANDARD<br>INSTRUMENTS in the<br>ACCESSORIES &<br>EQUIPMENT section     |
|   | Defective alternator stator or diodes  | See Bench Tests in ALTERNATOR article   |
|   | Defective regulator                    | See Regulator Check in  |

|   |  | ALTERNATOR article   |
|---|--|--|
| Alternator<br>Light Stays Off<br>With Ignition<br>Switch ON | Blown fuse   | See WIRING DIAGRAMS  |
|   | Defective alternator                                     | See Testing in<br>ALTERNATOR article   |
|   | Defective indicator light bulb or socket                 | See Indicator Warning<br>Lights in STANDARD<br>INSTRUMENTS in the<br>ACCESSORIES &<br>EQUIPMENT section          |
| Alternator<br>Light Stays OFF<br>With Ignition<br>Switch ON | Short in alternator wiring                               | See On-Vehicle Tests in ALTERNATOR article   |
|   | Defective rectifier bridge                               | See Bench Tests in ALTERNATOR article  |
| Lights or Fuses<br>Burn Out<br>Frequently                   | Defective alternator wiring                              | See On-Vehicle Tests in ALTERNATOR article   |
|   | Defective regulator                                      | See Regulator Check in ALTERNATOR article  |
|   | Defective battery  | Check and replace as necessary   |
| Ammeter Gauge<br>Shows Discharge                            | Loose or worn drive belt                                 | Check alternator drive belt tension and condition. See Belt Adjustment in TUNE-UP article in the TUNE-UP section |
|   | Defective wiring   | Check all wires and wire connections   |
|   | Defective alternator or regulator                        | See Bench Tests and<br>On-Vehicle Tests in<br>ALTERNATOR article   |
|   | Defective ammeter, or improper ammeter wiring connection | See Testing in<br>STANDARD INSTRUMENTS<br>in the ACCESSORIES &<br>EQUIPMENT section                              |
| Noisy<br>Alternator   | Loose drive pulley                                       | Tighten drive pulley attaching nut   |
|   | Loose mounting bolts                                     | Tighten all alternator mounting bolts  |
|   | Worn or dirty bearings                                   | See Bearing<br>Replacement<br>ALTERNATOR article   |

|   | Defective diodes or stator                                  | See Bench Test in<br>ALTERNATOR article  |
|---|---|--|
| Battery Does<br>Stay Charged                      | Loose or worn drive belt                                    | Check alternator drive belt tension and condition. See Belt Adjustment in appropriate TUNE-UP article in the TUNE-UP section |
|   | Loose or corroded battery connections                       | Check all charging system connections  |
|   | Loose alternator connections                                | Check all charging system connections  |
|   | Defective alternator or battery                             | See On-Vehicle Tests<br>and Bench Tests in<br>ALTERNATOR article   |
|   | Add-on electrical accessories exceeding alternator capacity |  |
| Battery<br>Overcharged-<br>Uses Too Much<br>Water | Defective battery   | Check alternator<br>output and repair as<br>necessary  |
|   | Defective alternator  | See On-Vehicle Test and<br>Bench Tests in<br>ALTERNATOR article  |
|   | Excessive alternator voltage                                | Check alternator output and repair as necessary  |

## IGNITION SYSTEM TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

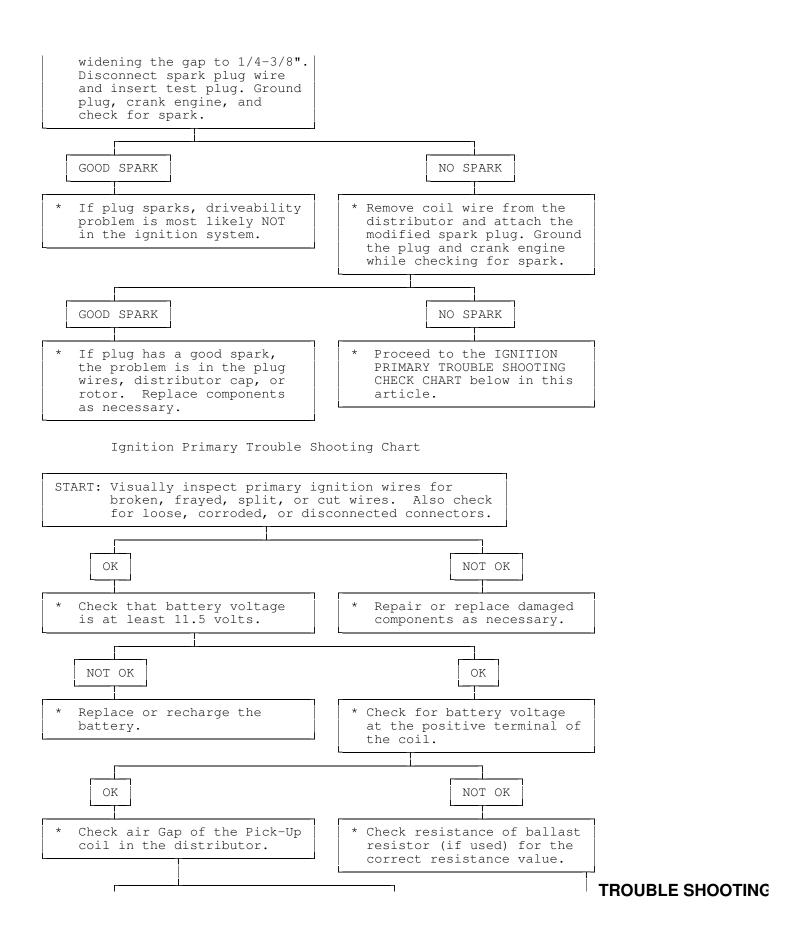

Ignition Secondary Trouble Shooting Chart

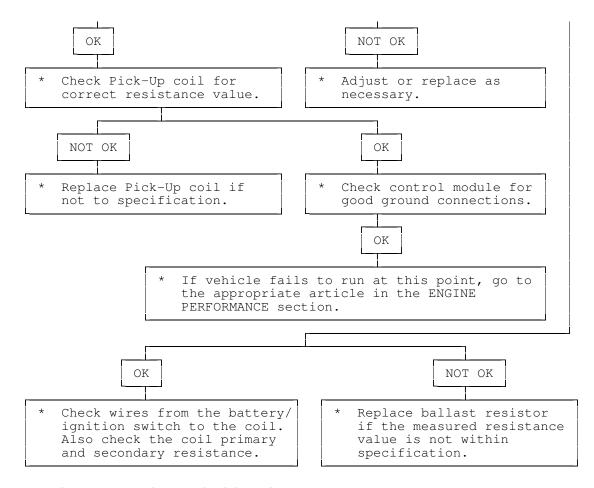

START: Visually inspect Spark Plug Wires, Coil Wires,
Plug Wire Boots, Rotor, and Distributor Cap for signs of damage.

NOT OK

\* To test secondary ignition system, modify a Spark Plug by attaching a ground wire

\* Repair or replace damaged components as necessary

## STARTER TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC STARTER TROUBLE SHOOTING CHART

| CONDITION                   | POSSIBLE CAUSE   | CORRECTION  |
|-----------------------------|--|---|
| Starter Fails<br>to Operate | Dead battery or bad<br>connections between<br>starter and battery      | Check battery charge and all wires and connections to starter |
|                             | Ignition switch faulty or misadjusted                                  | Adjust or replace ignition switch                             |
|                             | Open circuit between starter switch ignition terminal on starter relay | Check and repair wires and connections as necessary           |
|                             | Starter relay or starter defective                                     | See Testing in STARTER article                                |

|   | Open solenoid pull-in wire                              | See Testing in STARTER article                               |
|---|---|--|
| Starter Does Not<br>Operate and<br>Headlights Dim | Weak battery or dead cell                               | Charge or replace battery as necessary                       |
|   | Loose or corroded battery connections                   | Check that battery connections are clean and tight           |
|   | Internal ground in starter windings                     | See Testing in STARTER article                               |
|   | Grounded starter fields                                 | See Testing in STARTERS                                      |
|   | Armature rubbing on pole shoes                          | See STARTER article  |
| Starter Turns<br>but Engine<br>Does Not Rotate    | Starter clutch slipping                                 | See STARTER article  |
| Does Not Rotate                                   | Broken clutch housing                                   | See STARTER article  |
|   | Pinion shaft rusted or dry                              | See STARTER article  |
|   | Engine basic timing incorrect                           | See Ignition Timing in TUNE-UP article                       |
|   | Broken teeth on engine flywheel                         | Replace flywheel and check for starter pinion gear damage    |
| Starter Will Not<br>Crank Engine                  | Faulty overrunning clutch                               | See STARTER article  |
|   | Broken clutch housing                                   | See STARTER article  |
|   | Broken flywheel teeth                                   | Replace flywheel and check for starter pinion gear damage    |
|   | Armature shaft sheared or reduction gear teeth stripped | See STARTER article  |
|   | Weak battery  | Charge or replace battery as necessary                       |
|   | Faulty solenoid   | See On-Vehicle Tests in STARTER article                      |
|   | Poor grounds  | Check all ground connections for tight and clean connections |
|   | Ignition switch faulty or misadjusted                   | Adjust or replace ignition switch as necessary               |
| Starter Cranks                                    | Battery weak or   | Charge or replace  |

|   | Engine oil too heavy  | Check that proper viscosity oil is used                        |
|---|---|--|
|   | Poor battery-to-starter connections                           | Check that all between battery and starter are clean and tight |
|   | Current draw too low or too high                              | See Bench Tests in<br>STARTER article                          |
|   | Bent armature, loose pole<br>shoes screws or worn<br>bearings | See STARTER article  |
|   | Burned solenoid contacts                                      | Replace solenoid   |
|   | Faulty starter  | Replace starter  |
| Starter Engages<br>Engine Only<br>Momentarily | Engine timing too far advanced                                | See Ignition Timing in TUNE-UP article                         |
| Momentarity                                   | Overrunning clutch not engaging properly                      | Replace overrunning clutch. See STARTER article                |
|   | Broken starter clutch   | See STARTER article  |
|   | Broken teeth on engine flywheel                               | Replace flywheel and check starter pinion gear for damage      |
|   | Weak drive assembly thrust spring                             | See STARTER article  |
|   | Weak hold-in coil   | See Bench Tests in<br>STARTER article                          |
| Starter Drive<br>Will Not Engage              | Defective point assembly                                      | See Testing in STARTER article                                 |
|   | Poor point assembly ground                                    | See Testing in STARTER article                                 |
|   | Defective pull-in coil  | Replace starter solenoid                                       |
| Starter Relay<br>Does Not Close               | Dead battery  | Charge or replace<br>battery as necessary                      |
|   | Faulty wiring   | Check all wiring and connections leading to relay              |
|   | Neutral safety switch faulty                                  | Replace neutral safety switch                                  |
|   |   |  |

Engine overheated See ENGINE COOLING SYSTEM article

| -  |  |   |
|--|--|---|
| Starter Drive<br>Will Not<br>Disengage   | Starter motor loose on mountings   | Tighten starter attach bolts  |
| Disengage  | Worn drive end bushing   | See STARTER article   |
|  | Damaged engine flywheel teeth  | Replace flywheel and starter pinion gear for damage                                   |
|  | Drive yolk return spring broken or missing   | Replace return spring   |
|  | Faulty ignition switch   | Replace ignition switch   |
|  | Insufficient clearance between winding leads to solenoid terminal and main contact in solenoid | Replace starter solenoid  |
|  | Starter clutch not disengaging   | Replace starter clutch  |
|  | Ignition starter switch contacts sticking  | Replace ignition switch   |
| Starter Relay<br>Operates but<br>Solenoid Does Not   | Faulty solenoid switch, switch connections or  | Check all wiring between relay and solenoid or replace relay or solenoid as necessary |
|  | Broken lead or loose soldered connections  | Repair wire or wire connections as necessary  |
| Solenoid Plunger<br>Vibrates When<br>Switch is Engaged   | Weak battery   | Charge or replace<br>battery as necessary   |
| Switch is Engaged  | Solenoid contacts corroded   | Clean contacts or replace solenoid  |
|  | Faulty wiring  | Check all wiring leading to solenoid  |
|  | Broken connections inside switch cover   | Repair connections or replace solenoid  |
|  | Open hold-in wire  | Replace solenoid  |
| Low Current Draw   | Worn brushes or weak   | Replace brushes or<br>brush springs as<br>necessary                                   |
| High Pitched Whine<br>During Cranking<br>Before Engine<br>Fires but Engine<br>Fires and Cranks<br>Normally | Distance too great<br>between starter<br>pinion and flywheel                                   | Align starter or check<br>that correct starter<br>and flywheel are being<br>used      |

Fires With Key released. Engine Fires and Cranks Normally

Flywheel runout contributes to the intermittent nature

## **AIR CONDITIONING & HEAT**

# AIR CONDITIONING TROUBLE SHOOTING

WARNING: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### BASIC AIR CONDITIONING TROUBLE SHOOTING CHART

| CONDITION   | POSSIBLE CAUSE   |
|---|--|
| Compressor Not Working                            | <ul> <li>Compressor clutch circuit open.</li> <li>Compressor clutch coil inoperative.</li> <li>Poor clutch ground connection.</li> <li>Fan belts loose.</li> <li>Thermostatic switch inoperative.</li> <li>Thermostatic switch not adjusted.</li> <li>Ambient temperature switch open.</li> <li>Superheat fuse blown.</li> </ul>   |
| Excessive Noise or Vibration                      | <ul> <li>Missing or loose mounting bolts.</li> <li>Bad idler pulley bearings.</li> <li>Fan belts not tightened correctly.</li> <li>Compressor clutch contacting body.</li> <li>Excessive system pressure.</li> <li>Compressor oil level low.</li> <li>Damaged clutch bearings.</li> <li>Damaged reed valves.</li> <li>Damaged compressor.</li> </ul>   |
| Insufficient or No Cooling;<br>Compressor Working | <ul> <li>Expansion valve inoperative.</li> <li>Heater control valve stuck open.</li> <li>Low system pressure.</li> <li>Blocked condenser fins.</li> <li>Blocked evaporator fins.</li> <li>Vacuum system leak.</li> <li>Vacuum motors inoperative.</li> <li>Control cables improperly adjusted.</li> <li>Restricted air inlet.</li> <li>Mode doors binding.</li> <li>Blower motor inoperative.</li> <li>Temperature above system capacity.</li> </ul> |

## HEATER SYSTEM TROUBLE SHOOTING

NOTE: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle

configuration. The purpose of this Trouble Shooting information is to provide a list of correct the correct that the correct the correct that the correct the correct that the c

problem symptoms. For model-specific Trouble Shooting, refer to DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

## BASIC HEATER SYSTEM TROUBLE SHOOTING CHART

| CONDITION                               | POSSIBLE CAUSE   |  |
|---|--|--|
| Insufficient, Erratic, or No Heat       | <ul> <li>Low Coolant Level</li> <li>Incorrect thermostat.</li> <li>Restricted coolant flow through heater core.</li> <li>Heater hoses plugged.</li> <li>Misadjusted control cable.</li> <li>Sticking heater control valve.</li> <li>Vacuum hose leaking.</li> <li>Vacuum hose blocked.</li> <li>Vacuum motors inoperative.</li> <li>Blocked air inlet.</li> <li>Inoperative heater blower motor.</li> <li>Oil residue on heater core fins.</li> <li>Dirt on heater core fins.</li> </ul> |  |
| Too Much Heat                           | <ul><li>Improperly adjusted cables.</li><li>Sticking heater control valve.</li><li>No vacuum to heater control valve.</li><li>Temperature door stuck open.</li></ul>   |  |
| Air Flow Changes During<br>Acceleration | <ul><li>Vacuum system leak.</li><li>Bad check valve or reservoir.</li></ul>  |  |
| Air From Defroster At All<br>Times      | <ul><li>Vacuum system leak.</li><li>Improperly adjusted control cables.</li><li>Inoperative vacuum motor.</li></ul>  |  |
| Blower Does Not Operate<br>Correctly    | <ul> <li>Blown fuse.</li> <li>Blower motor windings open.</li> <li>Resistors burned out.</li> <li>Motor ground connection loose.</li> <li>Wiring harness connections loose.</li> <li>Blower motor switch inoperative.</li> <li>Blower relay inoperative.</li> <li>Fan binding or foreign object in housing.</li> <li>Fan blades broken or bent.</li> </ul>   |  |

## **BRAKES**

# BRAKE SYSTEM TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

TROUBLE SHOOTING - BASIC

# BRAKE SYSTEM TROUBLE SHOOTING CHART

| CONDITION                        | POSSIBLE CAUSE                         | CORRECTION                               |
|----------------------------------|--|--|
| Brakes Pull Left<br>or Right     | Incorrect tire pressure                | Inflate tires to proper pressure         |
|                                  | Front end out of alignment             | See WHEEL ALIGNMENT                      |
|                                  | Mismatched tires                       | Check tires sizes                        |
|                                  | Restricted brake lines or hoses        | Check hose routing                       |
|                                  | Loose or malfunctioning caliper        | See DISC BRAKES or<br>BRAKE SYSTEM       |
|                                  | Bent shoe or oily linings              | See DRUM BRAKES or<br>BRAKE SYSTEM       |
|                                  | Malfunctioning rear brakes             | See DRUM, DISC BRAKES<br>or BRAKE SYSTEM |
|                                  | Loose suspension parts                 | See SUSPENSION                           |
| Noises Without<br>Brakes Applied | Front linings worn out                 | Replace linings                          |
|                                  | Dust or oil on drums or rotors         | See DRUM, DISC BRAKES<br>or BRAKE SYSTEM |
| Noises With<br>Brakes Applied    | Insulator on outboard shoe damaged     | See DISC BRAKES or<br>BRAKE SYSTEM       |
|                                  | Incorrect pads or linings              | Replace pads or linings                  |
| Brake Rough, Chat<br>or Pulsates | ters<br>Excessive lateral runout       | Check rotor runout                       |
|                                  | Parallelism not to specifications      | Reface or replace rotor                  |
|                                  | Wheel bearings not adjusted            | See SUSPENSION                           |
|                                  | Rear drums out-of-round                | Reface or replace drums                  |
|                                  | Disc pad reversed, steel against rotor | Remove and reinstall pad                 |
| Excessive Pedal<br>Effort        | Malfunctioning power unit              | See POWER BRAKES or<br>BRAKE SYSTEM      |
|                                  | Partial system failure                 | Check fluid and pipes                    |
|                                  | Worn disc pad or lining                | Replace pad or lining                    |

# CARBURETOR TROUBLE SHOOTING:

With Black Smoke Fast idle cam index

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

BASIC COLD START SYMPTOMS TROUBLE SHOOTING CHART

## DIESEL ENGINE TROUBLE SHOOTING

This is GENERAL information. This article is not intended NOTE: to be specific to any unique situation or individual vehicle

configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

NOTE: Diesel engines mechanical diagnosis is the same as gasoline engines for items such as noisy valves, bearings, pistons,

etc. The following trouble shooting covers only items pertaining to diesel engines.

#### BASIC DIESEL ENGINE TROUBLE SHOOTING CHART

| CONDITION             | POSSIBLE CAUSE                            | CORRECTION                       |
|-----------------------|---|----------------------------------|
| Engine Won't<br>Crank | Bad battery connections or dead batteries | Check connections and/or replace |

|  | Bad starter connections or bad starter  | <pre>batteries Check connections and/or replace batteries</pre>  |            |
|--|---|--|------------|
| Engine Cranks<br>Slowly, Won't<br>Start                | Bad battery connections or dead batteries   | Check connections and/or replace batteries   |            |
|  | Engine oil too heavy  | Replace engine oil   |            |
| Engine Cranks<br>Normally, But<br>Will Not Start       | Glow plugs not functioning  Glow plug control not functioning  Fuel not injected into cylinders   | Check glow plug system, see FUEL SYSTEMS Check controller, see FUEL SYSTEMS Check fuel injectors, see FUEL SYSTEMS |            |
|  | No fuel to injection pump  Fuel filter blocked  Fuel tank filter blocked  Fuel pump not operating | Check fuel delivery system Replace fuel filter Replace fuel tank filter Check pump operation                       |            |
|  | Fuel return system blocked  | <pre>and/or replace pump Inspect system and remove restriction</pre>   |            |
|  | No voltage to fuel solenoid   | Check solenoid and connections   |            |
|  | Incorrect or contaminated fuel  | Replace fuel   |            |
|  | Incorrect injection pump<br>timing<br>Low compression   | Re-adjust pump timing,<br>see FUEL SYSTEMS<br>Check valves, pistons,<br>rings, see ENGINES                         |            |
|  | Injection pump malfunction  | Inspect and/or replace injection pump  |            |
| Engine Starts,<br>Won't Idle                           | Incorrect slow idle adjustment Fast idle solenoid malfunctioning Fuel return system blocked       | Reset idle adjustment,<br>see TUNE-UP<br>Check solenoid and<br>connections<br>Check system and remove              |            |
|  | Glow plugs go off too soon  | restrictions See glow plug diagnosis in FUEL SYSTEMS   |            |
|  | Injection pump timing incorrect No fuel to injection pump   | Reset pump timing, see FUEL SYSTEMS Check fuel delivery system   |            |
|  | Incorrect or contaminated fuel Low compression  | Replace fuel Check valves, piston,   |            |
|  | Injection pump malfunction  | rings, see ENGINES<br>Replace injection pump,  |            |
|  | Fuel solenoid closes in RUN position  | see FUEL SYSTEMS<br>Check solenoid and<br>connections  |            |
| Engines Starts/<br>Idles Rough W/out<br>Smoke or Noise | Incorrect slow idle adjustment Injection line fuel leaks Fuel return system blocked               | Reset slow idle, see TUNE-UP Check lines and connections Check lines and connections                               |            |
| <del>-</del>   | Injection line fuel leaks   | Check lines and connections Check lines and  | E SHOOTING |

|   | Air in fuel system Incorrect or contaminated fuel   | Bleed air from system<br>Replace fuel  |                    |
|---|---|--|--------------------|
|   | Injector nozzle malfunction   | Check nozzles, see<br>FUEL SYSTEMS   | _                  |
| Engines Starts<br>and Idles Rough<br>W/out Smoke or<br>Noise, But Clears<br>After Warm-Up | <pre>Injection pump timing incorrect Engine not fully broken in Air in system Injector nozzle malfunction</pre>   | Reset pump timing, see FUEL SYSTEMS Put more miles on engine Bleed air from system Check nozzles, see FUEL SYSTEMS   |                    |
| Engine Idles<br>Correctly,<br>Misfires Above<br>Idle                                      | Blocked fuel filter Injection pump timing incorrect Incorrect or contaminated fuel  | Replace fuel filter<br>Reset pump timing, see<br>FUEL SYSTEMS<br>Replace fuel  |                    |
| Engine Won't<br>Return To Idle  | Fast idle adjustment incorrect Internal injection pump malfunction External linkage binding   | Reset fast idle, see<br>TUNE-UP<br>Replace injection pump,<br>see FUEL SYSTEMS<br>Check linkage and<br>remove binding  |                    |
| Fuel Leaks On<br>Ground   | Loose or broken fuel line Internal injection pump seal leak   | Check lines and connections Replace injection pump, see FUEL SYSTEMS   |                    |
| Cylinder<br>Knocking Noise  | Injector nozzles sticking open<br>Very low nozzle opening<br>pressure   | Test injectors, see<br>FUEL SYSTEMS<br>Test injectors and/or<br>replace  |                    |
| Loss of Engine<br>Power   | Restricted air intake EGR valve malfunction Blocked or damaged exhaust system  Blocked fuel tank filter Restricted fuel filter  Block vent in gas cap  Tank-to-injection pump fuel supply blocked Blocked fuel return system Incorrect or contaminated fuel Blocked injector nozzles  Low compression | Remove restriction Replace EGR valve Remove restriction and/or replace components Replace filter Remove restriction and/or replace filter Remove restriction and/or replace cap Check fuel lines and connections Remove restriction Replace fuel  Check nozzle for blockage, see FUEL SYSTEMS Check valves, rings, |                    |
| Loud Engine<br>Noise With Black<br>Smoke  | Basic timing incorrect  EGR valve malfunction Internal injection pump malfunction   | Reset timing, see FUEL SYSTEMS Replace EGR valve Replace injection pump, see FUEL SYSTEMUBLES  | HOOTING - BASIC PR |

|                          | Incorrect injector pump housing pressure                               | Check pressure, see FUEL SYSTEMS                        |
|--------------------------|--|---|
| Engine<br>Overheating    | Cooling system leaks   | Check cooling system and repair leaks                   |
| 0.000000000              | Belt slipping or damaged   | Check tension and/or replace belt                       |
|                          | Thermostat stuck closed  | Remove and replace<br>thermostat, see<br>ENGINE COOLING |
|                          | Head gasket leaking  | Replace head gasket                                     |
| Oil Light on at<br>Idle  | Low oil pump pressure  | Check oil pump operation, see ENGINES                   |
| Ture                     | Oil cooler or line restricted  | Remove restriction and/or replace cooler                |
| Engine Won't<br>Shut Off | Injector pump fuel solenoid does not return fuel valve to OFF position | Remove and check solenoid and replace if needed         |
|                          | VACUUM PUMP DIAGNOSIS  |   |
| Excessive Noise          | Loose pump-to-drive assembly screws                                    | Tighten screws  |
|                          | Loose tube on pump assembly Valves not functioning properly            | Tighten tube<br>Replace valves                          |
| Oil Leakage              | Loose end plug<br>Bad seal crimp                                       | Tighten end plug<br>Remove and re-crimp<br>seal         |

# FUEL INJECTION TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

## BASIC FUEL INJECTION TROUBLE SHOOTING CHART

| CONDITION                                  | POSSIBLE CAUSE                       | CORRECTION                              |
|--|--------------------------------------|---|
| Engine Won't<br>Start (Cranks<br>Normally) | Cold start valve inoperative         | Test valve and circuit                  |
| Normarry,                                  | Poor connection; vacuum or wiring    | Check vacuum and electrical connections |
|  | Contaminated fuel                    | Test fuel for water or alcohol          |
|  | Defective fuel pump relay or circuit | Test relay and wiring                   |
|  | Battery too low                      | Charge and test <b>TROUI</b>            |

|                              | Low fuel pressure                        | Test pressure regul-<br>ator and fuel pump,<br>check for restricted<br>lines and filters |
|------------------------------|--|--|
|                              | No distributor reference pulses          | Repair ignition system as necessary  |
|                              | Open coolant temperature sensor circuit  | Test sensor and wiring   |
|                              | Shorted W.O.T. switch in T.P.S.          | Disconnect W.O.T. switch, engine should start  |
|                              | Defective ECM                            | Replace ECM  |
|                              | Fuel tank residual pressure valve leaks  | Test for fuel pressure drop after shut down  |
| Hard Starting                | Disconnected hot air tube to air cleaner | Reconnect tube and test control valve  |
|                              | Defective Idle Air Control (IAC) valve   | Test valve operation and circuit   |
|                              | Shorted, open or misadjusted T.P.S.      | Test and adjust or replace T.P.S.  |
|                              | EGR valve open                           | Test EGR valve and control circuit   |
|                              | Poor Oxygen sensor signal                | Test for shorted or circuit  |
| _                            | Incorrect mixture from PCV system        | Test PCV for flow, check sealing of oil filter cap                                       |
| Poor High Speed<br>Operation | Low fuel pump volume                     | Faulty pump or restricted fuel lines or filters  |
|                              | Poor MAP sensor signal                   | Test MAP sensor, vacuum hose and wiring  |
|                              | Poor Oxygen sensor signal                | Test for shorted or open sensor or circuit   |
|                              | Open coolant temperature sensor circuit  | Test sensor and wiring   |
|                              | Faulty ignition operation                | Check wires for cracks or poor con-nections, test secondary voltage with oscilloscope    |
|                              | Contaminated fuel                        | Test fut TROUBLESHOOTING - BASIC PRO   |

|                                  |                                       | or alcohol   |
|----------------------------------|---------------------------------------|--|
|                                  | Intermittent ECM ground               | Test ECM ground connection for resistance  |
|                                  | Restricted air cleaner                | Replace air cleaner  |
|                                  | Restricted exhaust system             | Test for exhaust manifold back pressure  |
|                                  | Poor MAF sensor signal                | Check leakage<br>between sensor and<br>manifold                                    |
|                                  | Poor VSS signal                       | If tester for ALCL hook-up is available check that VSS reading matches speedometer |
| Ping or Knock on<br>Acceleration | Poor Knock sensor signal              | Test for shorted or open sensor or circuit   |
|                                  | Poor Baro sensor signal               | Test for shorted or open sensor or circuit   |
|                                  | Improper ignition timing              | See VEHICLE EMISSION CONTROL LABEL (where applicable)                              |
|                                  | Check for engine overheating problems | Low coolant, loose belts or electric cooling fan inoperative                       |

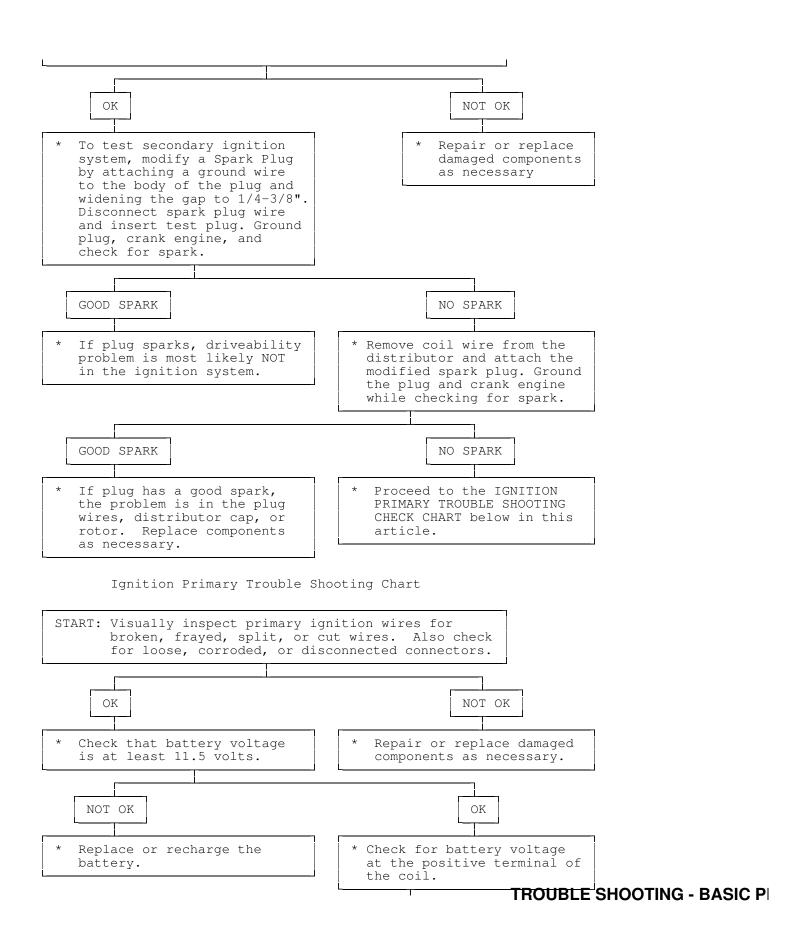

NOTE: For additional electronic fuel injection trouble shooting information, see the appropriate article in the ENGINE PERFORMANCE section (not all vehicles have Computer Engine Control articles). Information is provided there for diagnosing fuel system problems on vehicles with electronic fuel injection.

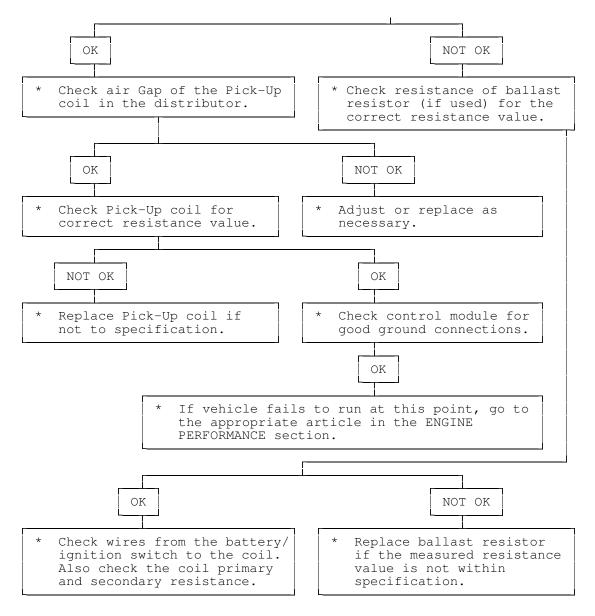

# IGNITION SYSTEM TROUBLE SHOOTING

NOTE: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

Ignition Secondary Trouble Shooting Chart

START: Visually inspect Spark Plug Wires, Coil Wires, Plug Wire Boots, Rotor, and Distributor Cap for signs of damage.

## STARTER TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

## BASIC STARTER TROUBLE SHOOTING CHART

| CONDITION                   | POSSIBLE CAUSE  | CORRECTION  |
|-----------------------------|---|---|
| Starter Fails<br>to Operate | Dead battery or bad connections between starter and battery | Check battery charge and all wires and connections to starter |

|   | Ignition switch faulty or misadjusted                                  | Adjust or replace ignition switch                         |
|---|--|---|
|   | Open circuit between starter switch ignition terminal on starter relay | Check and repair wires and connections as necessary       |
|   | Starter relay or starter defective                                     | See Testing in STARTER article                            |
|   | Open solenoid pull-in wire   | See Testing in STARTER article                            |
| Starter Does Not<br>Operate and<br>Headlights Dim | Weak battery or dead cell  | Charge or replace<br>battery as necessary                 |
| neddignes bim                                     | Loose or corroded battery connections                                  | Check that battery connections are clean and tight        |
|   | Internal ground in starter windings                                    | See Testing in STARTER article                            |
|   | Grounded starter fields  | See Testing in STARTERS                                   |
|   | Armature rubbing on pole shoes   | See STARTER article                                       |
| Starter Turns<br>but Engine<br>Does Not Rotate    | Starter clutch slipping  | See STARTER article                                       |
| Does Not Rotate                                   | Broken clutch housing  | See STARTER article                                       |
|   | Pinion shaft rusted or dry   | See STARTER article                                       |
|   | Engine basic timing incorrect  | See Ignition Timing in TUNE-UP article                    |
|   | Broken teeth on engine flywheel  | Replace flywheel and check for starter pinion gear damage |
| Starter Will Not<br>Crank Engine                  | Faulty overrunning clutch  | See STARTER article                                       |
|   | Broken clutch housing  | See STARTER article                                       |
|   | Broken flywheel teeth  | Replace flywheel and check for starter pinion gear damage |
|   | Armature shaft sheared or reduction gear teeth stripped                | See STARTER article                                       |
|   | Weak battery   | Charge or replace battery as necessary                    |
|   | Faulty solenoid  | See On-Vehicle Tests in STARTER article                   |

|   |   | connections for tight and clean connections                    |
|---|---|--|
|   | Ignition switch faulty or misadjusted                   | Adjust or replace ignition switch as necessary                 |
| Starter Cranks<br>Engine Slowly         | Battery weak or<br>defective                            | Charge or replace battery as necessary                         |
|   | Engine overheated                                       | See ENGINE COOLING<br>SYSTEM article                           |
|   | Engine oil too heavy                                    | Check that proper viscosity oil is used                        |
|   | Poor battery-to-starter connections                     | Check that all between battery and starter are clean and tight |
|   | Current draw too low or too high                        | See Bench Tests in STARTER article                             |
|   | Bent armature, loose pole shoes screws or worn bearings | See STARTER article  |
|   | Burned solenoid contacts                                | Replace solenoid   |
|   | Faulty starter  | Replace starter  |
| Starter Engages Engine Only Momentarily | Engine timing too far advanced                          | See Ignition Timing in TUNE-UP article                         |
| romentality                             | Overrunning clutch not engaging properly                | Replace overrunning clutch. See STARTER article                |
|   | Broken starter clutch                                   | See STARTER article  |
|   | Broken teeth on engine flywheel                         | Replace flywheel and check starter pinion gear for damage      |
|   | Weak drive assembly thrust spring                       | See STARTER article  |
|   | Weak hold-in coil                                       | See Bench Tests in STARTER article                             |
| Starter Drive                           | Defective point assembly                                | See Testing in STARTER   |

|  | Broken connections inside switch cover   | Repair connections or replace solenoid  |
|  | Open hold-in wire  | Replace solenoid  |
| Low Current Draw                                       | Worn brushes or weak   | Replace brushes or brush springs as necessary <b>TROU</b>                             |

TROUBLE SHOOTING - BAS

| During Cranking   | Distance too great<br>between starter<br>pinion and flywheel  | Align starter or check<br>that correct starter<br>and flywheel are being<br>used |
|---|---|--|
| High Pitched Whine After Engine Fires With Key released. Engine Fires and Cranks Normally | Distance too small between starter pinion and flywheel Flywheel runout contributes to the intermittent nature |  |

# TUNE-UP TROUBLE SHOOTING - GAS ENGINE VEHICLES

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### BASIC SPARK PLUG TROUBLE SHOOTING CHARTS

| CONDITION                          | POSSIBLE CAUSE                            | CORRECTION  |
|------------------------------------|---|---|
| Normal Spark                       | Light Tan or Gray deposits                | No Action   |
| Plug Condition                     | Electrode not burned or fouled            | No Action   |
|                                    | Gap tolerance not changed                 | No Action   |
| Cold Fouling or<br>Carbon Deposits | Overrich air/fuel mixture                 | Adjust air/fuel<br>mixture, see ENGINE<br>PERFORMANCE section |
|                                    | Faulty choke                              | Replace choke<br>assembly, see ENGINE<br>PERFORMANCE section  |
|                                    | Clogged air filter                        | Clean and/or replace air filter                               |
|                                    | Incorrect idle speed or dirty carburetor  | Reset idle speed and/<br>or clean carburetor                  |
|                                    | Faulty ignition wires                     | Replace ignition wiring                                       |
|                                    | Prolonged operation at idle               | Shut engine off<br>during long idle                           |
|                                    | Sticking valves or worn valve guide seals | Check valve train   |
| Wet Fouling                        | Worn rings and pistons                    | Install new rings and   |

or Oil Deposits

pistons

|                                      | Excessive cylinder wear                                    | Rebore or replace block                                       |
|--------------------------------------|--|---|
|                                      | Excessive valve guide clearance                            | Worn or loose bearing   |
| Gap Bridged                          | Deposits in combustion chamber becoming fused to electrode | Clean combustion chamber of deposits                          |
| Blistered<br>Electrode               | Engine overheating   | Check cooling system  |
| Electione                            | Wrong type of fuel   | Replace with correct fuel                                     |
|                                      | Loose spark plugs  | Retighten spark plugs   |
|                                      | Over-advanced ignition timing                              | Reset ignition timing see ENGINE PERFORMANCE                  |
| Pre-Ignition or<br>Melted Electrodes | Incorrect type of fuel                                     | Replace with correct fuel                                     |
|                                      | Incorrect ignition timing                                  | Reset ignition timing see ENGINE PERFORMANCE                  |
|                                      | Burned valves  | Replace valves  |
|                                      | Engine Overheating   | Check cooling system  |
|                                      | Wrong type of spark plug, too hot                          | Replace with correct<br>spark plug, see<br>ENGINE PERFORMANCE |
| Chipped<br>Insulators                | Severe detonation  | Check for over-<br>advanced timing or<br>combustion           |
|                                      | Improper gapping procedure                                 | Re-gap spark plugs  |
| Rust Colored<br>Deposits             | Additives in unleaded fuel                                 | Try different fuel brand                                      |
| Water In Combus-<br>tion Chamber     | Blown head gasket or cracked head                          | Repair or replace<br>head or head gasket                      |

NOTE:

Before diagnosing an electronic ignition system, ensure that all wiring is connected properly between distributor, wiring connector and spark plugs. Ignition problem will show up either as: Engine Will Not Start or Engine Runs Rough.

# BASIC ELECTRONIC IGNITION TROUBLE SHOOTING CHARTS

| CONDITION             | POSSIBLE CAUSE  | CORRECTION     |
|-----------------------|---|----------------|
| Engine Won't<br>Start | Open circuit between distributor and bulkhead connector | Repair circuit |
|                       | Open circuit between                                    | Repair circuit |

|   | ignition switch  |   |
|---|--|---|
|   | Open circuit between ignition switch and starter solenoid  | Repair circuit  |
| Engine Runs<br>Rough  | Fuel lines leaking or clogged  | Tighten fitting, remove restriction   |

#### VACUUM PUMP - DIESEL TROUBLE SHOOTING

NOTE: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle

configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available

in the section(s) you are accessing.

NOTE: Diesel engines mechanical diagnosis is the same as gasoline engines for items such as noisy valves, bearings, pistons, etc. The following trouble shooting covers only items

pertaining to diesel engines.

VACUUM PUMP (DIESEL) TROUBLE SHOOTING CHART

| Excessive Noise | Loose pump-to-drive assembly screws Loose tube on pump assembly Valves not functioning properly | Tighten screws Tighten tube Replace valves      |
|-----------------|---|---|
| Oil Leakage     | Loose end plug<br>Bad seal crimp  | Tighten end plug<br>Remove and re-crimp<br>seal |

#### MANUAL TRANSMISSION

## MANUAL TRANSMISSION TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### MANUAL TRANSMISSION/TRANSAXLE TROUBLE SHOOTING

| Condition  | Possible Cause   |
|--|--|
| Noisy In Forward Gears   | .Low gear oil level, .Loose bell housing bolts, .Worn bearings or gears  |
| Clunk On Deceleration (FWD Only)   | .Loose engine mounts, .Worn inboard CV joints, .Worn differential pinion shaft, .Side gear hub counterbore in case worn oversize |
| Gear Clash When Shifting<br>Forward Gears  | .Clutch Out Of Adjustment, .Shift linkage damaged or out of adjustment, .Gears or synchronizers damaged, .Low gear oil level     |
| Transmission Noisy When<br>Moving (RWD Only) Quiet In<br>Neutral With Clutch Engaged | .Worn rear outputshaft bearing   |
| Gear Rattle  | .Worn bearings, .Wrong gear oil, .Low gear oil, .Worn gears  |
| Steady Ticking At Idle<br>(Increases With RPM)                                       | .Broken tooth on gear  |
| Gear Clash When Shifting<br>Forward Gears  | .Worn or broken synchronizers  |
| Loud Whine In Reverse  | .Normal condition (1)  |

| Noise When Stepping On Clutch                              | .Bad release bearing, .Worn pilot bearing  |
|--|--|
| Ticking Or Screeching As<br>Clutch Is Engaged              | .Faulty release bearing,<br>.Uneven pressure plate fingers   |
| Click Or Snap When Clutch<br>Is Engaged                    | .Worn clutch fork, .Worn or broken front bearing retainer  |
| Transmission Shifts Hard                                   | .Clutch not releasing, .Shift mechanism binding, .Clutch installed backwards   |
| Will Not Shift Into One<br>Gear, Shifts Into All<br>Others | .Bent shift fork,<br>.Worn detent balls  |
| Locked Into Gear,<br>Cannot Shift                          | .Clutch adjustment,<br>.Worn detent balls  |
| Transmission Jumps Out<br>Of Gear                          | .Pilot bearing worn, .Bent shift fork, .Worn gear teeth or face .Excessive gear train end play .Worn synchronizers .Missing detent ball spring .Shift mechanism worn or out of adjustment .Engine or transmission mount bolts loose or out of adjustment .Transmission not aligned |
| Shift Lever Rattle   | .Worn shift lever or detents<br>.Worn shift forks<br>.Worn synchronizers sleeve  |
| Shift Lever Hops Under<br>Acceleration                     | .Worn engine or transmission mounts  |
| (1) - Most units use spur cut gears                        | in reverse and are noisy   |

## **POWERTRAIN**

## **CLUTCH TROUBLE SHOOTING**

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

| CONDITION             | POSSIBLE CAUSE                              | CORRECTION                                      |
|-----------------------|---|---|
| Chattering or         | Incorrect clutch adjustment                 | Adjust clutch                                   |
| Grabbing              | Oil, grease or glaze on facings             | Disassemble and clean or replace                |
|                       | Loose "U" joint flange                      | See DRIVE AXLES article                         |
|                       | Worn input shaft spline                     | Replace input shaft                             |
|                       | Binding pressure plate                      | Replace pressure plate                          |
|                       | Binding release lever                       | See CLUTCH article                              |
|                       | Binding clutch disc hub                     | Replace clutch disc                             |
|                       | Unequal pressure plate contact              | Replace worn/misaligned components              |
|                       | Loose/bent clutch disc                      | Replace clutch disc                             |
|                       | Incorrect transmission alignment            | Realign transmission                            |
|                       | Worn pressure plate, disc or flywheel       | Replace damaged components                      |
|                       | Broken or weak pressure springs             | Replace pressure plate                          |
|                       | Sticking clutch pedal                       | Lubricate clutch pedal<br>& linkage             |
|                       | Incorrect clutch disc facing                | Replace clutch disc                             |
|                       | Engine loose in chassis                     | Tighten all mounting bolts                      |
| Failure to<br>Release | Oil or grease on clutch facings             | Clean or replace clutch clutch disc             |
|                       | Incorrect release lever or pedal adjustment | See CLUTCH article                              |
|                       | Worn or broken clutch facings               | Replace clutch disc                             |
|                       | Bent clutch disc or pressure plate          | Replace damaged components                      |
|                       | Clutch disc hub binding on input shaft      | Clean or replace clutch disc and/or input shaft |
|                       | Binding pilot bearing                       | Replace pilot bearing                           |
|                       | Sticking release bearing sleeve             | Replace release bearing and/or sleeve           |

Binding clutch catrouble shooting -abasic proceduresarticle Text

| Heavy and/or<br>Stiff Pedal | Sticking release bearing sleeve               | Replace release bearing and/or sleeve TROUBLE SHOOTING - BA |
|-----------------------------|---|---|
|                             | Dry release fork between pivot                | Lubricate release fork and pivot                            |

## DRIVE AXLE - NOISE DIAGNOSIS

Unrelated Noises

Some driveline trouble symptoms are also common to the engine, transmission, wheel bearings, tires, and other parts of the vehicle. Ensure cause of trouble actually is in the drive axle before adjusting, repairing, or replacing any of its parts.

Non-Drive Axle Noises

A few conditions can sound just like drive axle noise and have to be considered in pre-diagnosis. The 4 most common noises are exhaust, tires, CV/universal joints and wheel trim rings. TROUBLE SHOOTING - BASIC  $\mathbf{F}$ 

In certain conditions, the pitch of the exhaust gases may sound like gear whine. At other times, it may be mistaken for a wheel bearing rumble.

Tires, especially radial and snow, can have a high-pitched tread whine or roar, similar to gear noise. Also, some non-standard tires with an unusual tread construction may emit a roar or whine.

Defective CV/universal joints may cause clicking noises or excessive driveline play that can be improperly diagnosed as drive axle problems.

Trim and moldings also can cause a whistling or whining noise. Ensure none of these components are causing the noise before disassembling the drive axle.

Gear Noise

A "howling" or "whining" noise from the ring and pinion gear can be caused by an improper gear pattern, gear damage, or improper bearing preload. It can occur at various speeds and driving conditions, or it can be continuous.

Before disassembling axle to diagnose and correct gear noise, make sure that tires, exhaust, and vehicle trim have been checked as possible causes.

Chuckle

This is a particular rattling noise that sounds like a stick against the spokes of a spinning bicycle wheel. It occurs while decelerating from 40 MPH and usually can be heard until vehicle comes to a complete stop. The frequency varies with the speed of the vehicle.

A chuckle that occurs on the driving phase is usually caused by excessive clearance due to differential gear wear, or by a damaged tooth on the coast side of the pinion or ring gear. Even a very small tooth nick or a ridge on the edge of a gear tooth is enough the cause the noise.

This condition can be corrected simply by cleaning the gear tooth nick or ridge with a small grinding wheel. If either gear is damaged or scored badly, the gear set must be replaced. If metal has broken loose, the carrier and housing must be cleaned to remove particles that could cause damage.

Knock

This is very similar to a chuckle, though it may be louder, and occur on acceleration or deceleration. Knock can be caused by a gear tooth that is damaged on the drive side of the ring and pinion gears. Ring gear bolts that are hitting the carrier casting can cause knock. Knock can also be due to excessive end play in the axle shafts.

Clunk

Clunk is a metallic noise heard when an automatic transmission is engaged in Reverse or Drive, or when throttle is applied or released. It is caused by backlash somewhere in the driveline, but not necessarily in the axle. To determine whether driveline clunk is caused by the axle, check the total axle backlash as follows:

- 1) Raise vehicle on a frame or twinpost hoist so that drive wheels are free. Clamp a bar between axle companion flange and a part of the frame or body so that flange cannot move.
- 2) On conventional drive axles, lock the left wheel to keep it from turning. On all models, turn the right wheel slowly until it is felt to be in Drive condition. Hold a chalk marker on side of tire about 12" from center of wheel. Turn wheel in the opposite direction until it is again felt to be in Drive condition.
  - 3) Measure the length of the chalk mark, which iTROUBLE SHOOTING BASIC PRO

axle backlash. If backlash is one inch or less, drive axle is not the source of clunk noise.

Bearing Whine

Bearing whine is a high-pitched sound similar to a whistle. It is usually caused by malfunctioning pinion bearings. Pinion bearings operate at drive shaft speed. Roller wheel bearings may whine in a similar manner if they run completely dry of lubricant. Bearing noise will occur at all driving speeds. This distinguishes it from gear whine, which usually comes and goes as speed changes.

Bearing Rumble

Bearing rumble sounds like marbles being tumbled. It is usually caused by a malfunctioning wheel bearing. The lower pitch is because the wheel bearing turns at only about 1/3 of drive shaft speed.

Chatter On Turns

This is a condition where the entire front or rear of vehicle vibrates when vehicle is moving. The vibration is plainly felt as well as heard. Extra differential thrust washers installed during axle repair can cause a condition of partial lock-up that creates this chatter.

Axle Shaft Noise

Axle shaft noise is similar to gear noise and pinion bearing whine. Axle shaft bearing noise will normally distinguish itself from gear noise by occurring in all driving modes (Drive, cruise, coast and float), and will persist with transmission in Neutral while vehicle is moving at problem speed.

If vehicle displays this noise condition, remove suspect axle shafts, replace wheel seals and install a new set of bearings. Re-evaluate vehicle for noise before removing any internal components.

Vibration

Vibration is a high-frequency trembling, shaking or grinding condition (felt or heard) that may be constant or variable in level and can occur during the total operating speed range of the vehicle.

The types of vibrations that can be felt in the vehicle can be divided into 3 main groups:

- \* Vibrations of various unbalanced rotating parts of the vehicle.
- \* Resonance vibrations of the body and frame structures caused by rotating of unbalanced parts.
- \* Tip-in moans of resonance vibrations from stressed engine or exhaust system mounts or driveline flexing modes.

## DRIVE AXLE - RWD TROUBLE SHOOTING

NOTE: This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available

in the section(s) you are accessing. For definitions of listed noises or sounds, see DRIVE AXLE - NOISE DIAGNOSIS under POWERTRAIN.

#### POWER STEERING TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### BASIC POWER STEERING TROUBLE SHOOTING CHART

| CONDITION                   | POSSIBLE CAUSE                                  | CORRECTION                      |
|-----------------------------|---|---------------------------------|
| Rattle or<br>Chucking Noise | Pressure hoses touching engine parts            | Adjust to proper clearance      |
|                             | Loose Pitman shaft                              | Adjust or replace if necessary  |
|                             | Tie rods ends or Pitman arm loose               | Tighten and check system        |
|                             | Rack and pinion mounts loose                    | Tighten all mounting bolts      |
|                             | Free play in worm and                           | See POWER STEERING GEAR article |
|                             | Loose sector shaft or thrust bearing adjustment | See POWER STEERING GEAR         |
|                             | Free play in pot coupling                       | See STEERING COLUMN article     |

**TROUBLE SHOOTING - BASIC PROC** 

|                            | Worn shaft serrations                 | See STEERING COLUMN article                             |
|----------------------------|---------------------------------------|---|
| Growl in<br>Steering Pump  | Excessive pressure in hoses           | Restricted hoses, see<br>POWER STEERING GEAR<br>article |
|                            | Scored pressure plates                | See POWER STEERING GEAR article                         |
|                            | Scored thrust plates or rotor         | See POWER STEERING GEAR article                         |
|                            | Extreme wear of cam ring              | See POWER STEERING GEAR article                         |
| Rattle in<br>Steering Pump | Vanes not installed                   | See POWER STEERING PUMP article                         |
|                            | Vanes sticking in rotor               | See POWER STEERING PUMP article                         |
| Swish noise in Pump        | Defective flow control valve          | See POWER STEERING PUMP article                         |
| Groan in<br>Steering Pump  | Air in fluid                          | See POWER STEERING PUMP article                         |
|                            | Poor pressure hose connection         | Tighten and check, replace if necessary                 |
| Squawk When<br>Turning     | Damper "O" ring on valve spool cut    | See POWER STEERING PUMP article                         |
| Moan or Whine in Pump      | Pump shaft bearing scored             | Replace bearing and fluid                               |
|                            | Air in fluid or fluid level low       | See POWER STEERING PUMP article                         |
|                            | Hose or column grounded               | Check and replace if necessary                          |
|                            | Cover "O" ring missing or damaged     | See POWER STEERING PUMP article                         |
|                            | Valve cover baffle missing or damaged | See POWER STEERING PUMP article                         |
|                            | Interference of components in pump    | See POWER STEERING PUMP article                         |
|                            | Loose or poor bracket alignment       | Correct or replace if necessary                         |
| Hissing When Parking       | Internal leakage in                   | Check valved assembly                                   |
| - 5                        | steering gear                         | first   |
| Chirp in<br>Steering Pump  | Loose or worn power steering belt     | Adjust or replace if necessary                          |

|                           | Free play in steering shaft bearing    | See STEERING COLUMN article                          |
|---------------------------|--|--|
|                           | Bearing loose on shaft serrations      | See STEERING COLUMN article                          |
| Clicking Noise<br>in Pump | Pump slippers too long                 | See POWER STEERING PUMP article                      |
|                           | Broken slipper springs                 | See POWER STEERING PUMP article                      |
|                           | Excessive wear or nicked rotors        | See POWER STEERING PUMP article                      |
|                           | Damaged cam contour                    | See POWER STEERING PUMP article                      |
| Poor Return of Wheel      | Wheel rubbing against turn signal      | See STEERING COLUMN<br>SWITCHES article              |
|                           | Flange rubbing steering gear adjuster  | See STEERING COLUMN article                          |
|                           | Tight or frozen steering shaft bearing | See STEERING COLUMN article                          |
|                           | Steering gear out of adjustment        | See POWER STEERING GEAR article                      |
|                           | Sticking or plugged spool valve        | See POWER STEERING PUMP article                      |
|                           | Improper front end alignment           | See WHEEL ALIGNMENT article                          |
|                           | Wheel bearings worn or loose           | See FRONT SUSPENSION article                         |
|                           | Ties rods or ball joints binding       | Check and replace if necessary                       |
|                           | Intermediate shaft joints binding      | See STEERING COLUMN article                          |
|                           | Kinked pressure hoses                  | Correct or replace if necessary                      |
|                           | Loose housing head spanner nut         | See POWER STEERING GEAR article                      |
|                           | Damaged valve lever                    | See POWER STEERING GEAR article                      |
|                           | Sector shaft adjusted too tight        | See ADJUSTMENTS in POWER STEERING GEAR article       |
|                           | Worm thrust bearing adjusted too tight | See ADJUSTMENTS in POWER STEERING GEAR article       |

## STEERING COLUMN TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### BASIC STEERING COLUMN TROUBLE SHOOTING CHART

| CONDITION            | POSSIBLE CAUSE        | CORRECTION                   |
|----------------------|-----------------------|------------------------------|
| Noise in<br>Steering | Coupling pulled apart | See STEERING COLUMNS article |

|                               | Column not correctly aligned           | See STEERING COLUMNS article                                |
|-------------------------------|--|---|
|                               | Broken lower joint                     | Replace joint   |
|                               | Horn contact ring not                  | See STEERING COLUMN article                                 |
|                               | Bearing not lubricated                 | See STEERING COLUMN article                                 |
|                               | Shaft snap ring not properly seated    | Reseat or replace snap ring                                 |
|                               | Plastic spherical joint not lubricated | See STEERING COLUMN article                                 |
|                               | Shroud or housing loose                | Tighten holding screws                                      |
|                               | Lock plate retaining ring not seated   | See STEERING COLUMN article                                 |
|                               | Loose sight shield                     | Tighten holding screws                                      |
| High Steering<br>Shaft Effort | Column assembly misaligned             | See STEERING COLUMN article                                 |
|                               | Improperly installed dust shield       | Adjust or replace   |
|                               | Tight steering universal joint         | See STEERING COLUMN article                                 |
| High Shift<br>Effort          | Column is out of alignment             | See STEERING COLUMN article                                 |
|                               | Improperly installed dust shield       | Adjust or replace   |
|                               | Seals or bearings not lubricated       | See STEERING COLUMNS article                                |
|                               | Mounting bracket screws too long       | Replace with new shorter screws                             |
|                               | Burrs on shift tube                    | Remove burrs or replace tube                                |
|                               | Lower bowl bearing assembled wrong     | See STEERING COLUMN article                                 |
|                               | Shift tube bent or broken              | Replace as necessary  |
|                               | Improper adjustment of shift levers    | See STEERING COLUMN article                                 |
| Improper Trans.               | Sheared shift tube joint               | Replace as necessary  |
| Shifting                      | Sheared lower shaft lever              | Replace as necessary  |
|                               | Improper shift lever adjustment        | See STEERING COLUMN article TROUBLE SHOOTING - BASIC PROCED |
|                               |  |   |

|                           | Improper gate plate adjustment       | See STEERING COLUMN article     |
|---------------------------|--------------------------------------|---------------------------------|
| Excess Play in Column     | Instrument panel bracket bolts loose | Tighten bolts and check bracket |
|                           | Broken weld nut on jacket            | See STEERING COLUMN article     |
|                           | Instrument bracket capsule sheared   | See STEERING COLUMN article     |
|                           | Column bracket/jacket<br>bolts loose | Tighten bolts and check bracket |
| Steering Locks<br>in Gear | Release lever mechanism              | See STEERING COLUMN article     |

#### SUSPENSION TROUBLE SHOOTING

NOTE:

This is GENERAL information. This article is not intended to be specific to any unique situation or individual vehicle configuration. The purpose of this Trouble Shooting information is to provide a list of common causes to problem symptoms. For model-specific Trouble Shooting, refer to SUBJECT, DIAGNOSTIC, or TESTING articles available in the section(s) you are accessing.

#### BASIC SUSPENSION TROUBLE SHOOTING CHART

| CONDITION                                     | POSSIBLE CAUSE                         | CORRECTION  |
|---|--|---|
| Front End Noise                               | Loose or worn wheel                    | See Wheel Bearing<br>Adjustment in<br>SUSPENSION              |
|   | Worn shocks or shock mountings         | Replace struts or strut mountings                             |
|   | Worn struts or strut mountings         | Replace struts or strut mountings                             |
|   | Loose or worn lower control arm        | See SUSPENSION  |
|   | Loose steering gear-to-<br>frame bolts | See STEERING  |
|   | Worn control arm bushings              | See SUSPENSION  |
|   | Ball joints not lubricated             | Lubricate ball joints & see Ball Joint Checking in SUSPENSION |
| Front Wheel<br>Shake, Shimmy,<br>or Vibration | Tires or wheels out of balance         | Check tire balance  |
|   | Incorrect wheel alignment              | See WHEEL ALIGNMENT   |
|   | Drive shaft unbalanced                 | Check drive shaft balan <b>TROUBLE SHOOTIN</b>                |

|  | Loose or worn wheel bearings    | See WHEEL ALIGNMENT                   |
